

# The Dementia with Lewy Bodies Consortium

**Patients may qualify for this study if they meet the requirements:**

- Have a diagnosis of probable dementia with lewy bodies, dementia with lewy body/MCI, or Parkinson's disease dementia
- Have a study partner who is able and willing to comply with required study procedures
- Have at least eight years of education

The study doctor will also check for other medical conditions or reasons that might prevent you from participating in the study.

**For more information, please contact**

## Summary of Study

The purpose of the Dementia with Lewy Bodies Consortium is to develop a collection of samples from individuals diagnosed with dementia with lewy bodies (DLB), dementia with lewy bodies/MCI, or Parkinson's disease dementia who will be followed over time. The consortium will collect detailed clinical information, biospecimens, and imaging data. Led by Dr. James Leverenz and other top leaders in the field, this consortium will fill the gap in resources available for biomarker development in Lewy Body Dementia and promote additional future research by having a readily available subject sample.
